Release 2024.12 [02/08/2024-]

General Overview & Impact

Account Search

In this release, major improvements have been made with the account search and filtering function. Users will now be able to filter and search according to more specific criteria, meaning that it is now easier to find a specific account in the list. (More details will be given in a user guide to follow).

A big portion of this release consists of work done to upgrade Mabdeck to .NET8.

Other items in this released include the addition of a validation message for smaller meter reads processed by data robots to prevent the addition of inaccurate meter reads via other methods. Another change included in the release is to prevent accounts in PAYG mode being moved out of a property, thus preventing any negative knock-on effects. Work was also done on improving the configuration setup of direct debits, where now, a user can select which direct debit robot they want to use on the set up of a direct debit form.

Additionally, there were several improvements made on the Orbit API which will allow for a more streamlined user experience when the functionality used going forward.

Work on the upcoming Friendly Disconnect and Emergency Credit features continues- this will remain hidden on the frontend until the work is completed.

New features

- [ ] New Account Search functionality - PBI/16066

Improvements

- [ ] Re-work of Orbit API code
- [ ] Allow a user to select a Direct Debit robot to use, on configuration setup - PBI/1351
- [ ] Remove "new feature" popup from the Dynamic Reports page - PBI/15935
