

# Release 2024.14

## [05/09/2024-]

## General Overview & Impact

🛠️ With this release, a lot of work was done on improving the Orbit API and upgrading the charge processor function app to .net8.

✅ This release also included other improvements such as addition of validation when changing billing mode to PAYG of multiple supplies as to prevent duplicate payment card numbers being created. Furthermore, work was done to remove the classic report 'Missing Meter Reads' which is covered by a newer dynamic report: 'Meter Data Report'.

✅ Now, with the work done in this release, a user who does not have PowerBI configured in Mabdeck will be shown an error page, for a better user experience.

💰 For our customers in the UAE, work was completed around the refunding of security deposits when a resident ends their tenancy and through the work completed for this release, UAE customers can now generate invoices to receive funds from their customers.

✨ Work on the upcoming Friendly Disconnect and Emergency Credit features continues- this will remain hidden on the frontend until the work is completed.

## New features

## New features

- PowerBi - Error page when PowerBi is not configured - [PBI/16388](#)
- Security Deposit - Move Out Process - [PBI/13872](#)
