

Release 2024.16 [16/10/2024-18/11/2024]

General Overview & Impact

🔧 With this release, We have continued to make progress on our larger projects which continues to be hidden on the production instances until the MVP is met.

📈 This release also included other improvements such as adding unit to charges being sent to the Orbit API, creating DB structure for Orbit to move to an event based structure & first stages of integrating Element IoT with Orbit.

💰 With the release, we have added a new payment method option for "Journal", this will allow users to track payments that happened outside of Mabdeck.

💰 Also we have upgraded the last of our function apps which handle various different automated processes in preparation for our .net 8 upgrade.

✨ Work on the upcoming Friendly Disconnect and Emergency Credit features continues- this will remain hidden on the frontend until the work is completed.

New features

- ✓ [PBI/18006](#): New Payment Method - Journal

Behind Feature Flag
